

Product Environmental Report

HomePod mini

Date introduced
October 13, 2020

Made with better materials

99%

recycled rare earth
elements

90%

recycled plastic in the
mesh fabric

Energy efficient

75%

less energy consumed than the
ENERGY STAR® energy efficiency
requirement

Responsible packaging

100%

of the wood fiber comes from
recycled and responsible sources

Tackling climate change

100%

We're committed to transitioning our entire
manufacturing supply chain to 100 percent
renewable electricity by 2030.

Smarter chemistry¹

- Mercury-free
- Brominated flame retardant-free
- PVC-free
- Beryllium-free

Apple Trade In

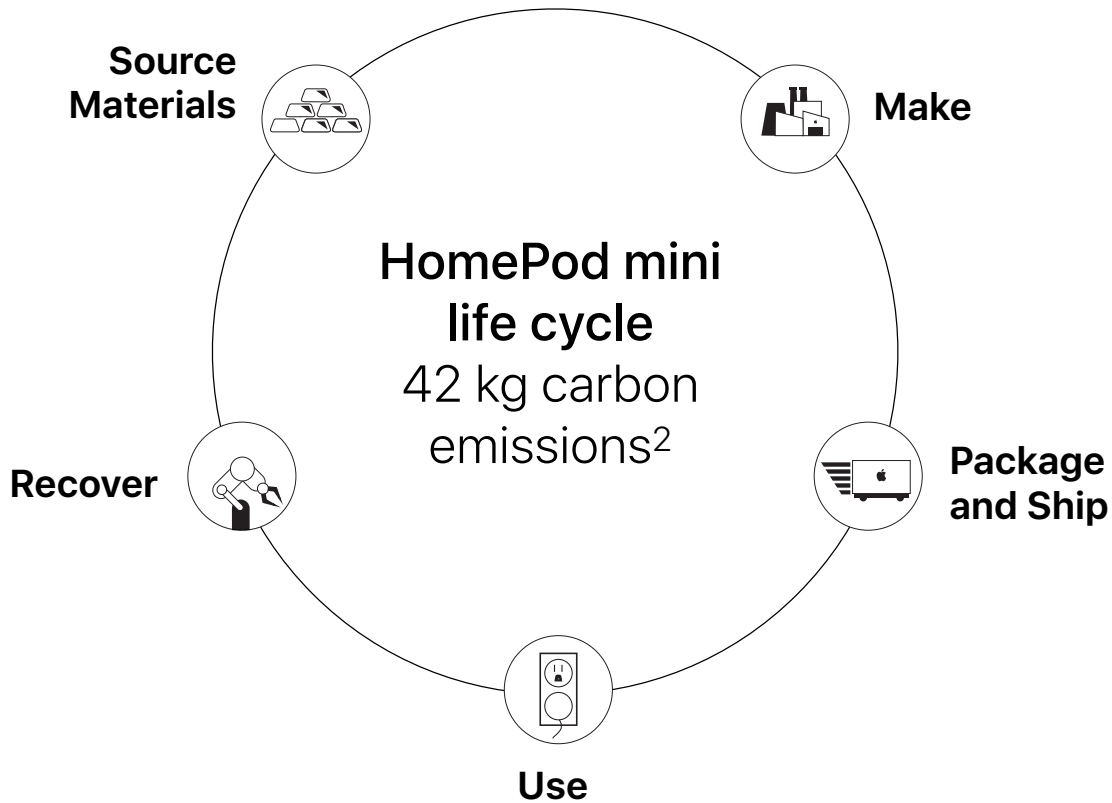

Return your device through
Apple Trade In and we'll give it
a new life or recycle it for free.

**Over 99 percent recycled rare earth elements
in HomePod mini**

Taking responsibility for our products at every stage

We take responsibility for our products throughout their life cycles—including the materials they are made of, the people who assemble them, and how they are recycled at end of life. And we focus on the areas where we can make the biggest difference for our planet: reducing our impact on climate change, conserving important resources, and using safer materials.

We sell millions of products. So making even small adjustments can have a meaningful impact.

Carbon footprint

We continue to make progress in reducing Apple's contribution to climate change—by focusing on making energy-efficient products with renewable or recycled materials and with renewable energy. Use of the dual-core S5 chip helped drive down energy needed to power HomePod mini, reducing the overall carbon footprint. Apple is committed to using carbon life cycle assessments to identify opportunities to drive down product greenhouse gas emissions.

HomePod mini life cycle carbon emissions

50%	Production
12%	Transport
37%	Use
<1%	End-of-life processing

Source Materials

The mesh fabric covering HomePod mini is made with more than 90 percent recycled plastic.

To conserve important resources, we work to reduce the material we use and aim to one day source only recycled or renewable materials in our products. And as we make this transition, we remain committed to the responsible sourcing of primary materials. We map many materials, some to the mineral source, and establish the strictest standards for smelters and refiners. We're proud to be recognized as a worldwide leader in the responsible sourcing of minerals in our products. Our product designs also consider the safety of those who make, use, and recycle our products, restricting the use of hundreds of harmful substances. Our standards go beyond what's required by law to protect people and the environment.

Rare earth elements

We use 100 percent recycled rare earth elements in the speaker magnet—99 percent of the total rare earth elements in the device.

Plastic

We're transitioning to plastics from renewable or recycled sources as alternatives to fossil fuel-based plastics. For HomePod mini, we use 35 percent or more recycled plastic in seven components. And we use more than 90 percent recycled plastic in the mesh fabric covering the device.

Tin, tantalum, tungsten, gold, and cobalt

Apple requires 100 percent of identified tin, tantalum, tungsten, gold, and cobalt smelters and refiners to participate in third-party audits.³

Smarter chemistry

HomePod mini is free of harmful substances like beryllium, brominated flame retardants, PVC, phthalates, and mercury.¹ And 100 percent of the materials in HomePod mini are covered by our [Regulated Substances Specification](#).

Make

The Apple Supplier Code of Conduct sets strict standards for the protection of people in our supply chain and the planet that we all share. Every year, we assess our suppliers' performance in upholding the standards required by our Code.

We work closely with our suppliers to provide safe and healthy workplaces where people are treated with dignity and respect, and to reduce suppliers' environmental impact. Our requirements apply across our supply chain, and include the responsible sourcing of materials. From the strong foundation set by our Code, we go further—from helping suppliers transition to renewable energy, to providing educational opportunities for their employees, to supporting final assembly suppliers in reducing waste.

Greener chemicals

All HomePod mini final assembly supplier sites use safer cleaners and degreasers in their manufacturing processes, as determined by the GreenScreen® assessment method.⁴

Zero Waste to Landfill

Apple's Zero Waste Program helps suppliers eliminate waste sent to landfill.

Supplier energy use

All HomePod mini final assembly supplier sites are transitioning to 100 percent renewable energy for Apple production.

Package and Ship

HomePod mini packaging is made with 100 percent recycled and responsibly sourced wood fiber.

To improve our packaging, we are working to eliminate plastics, increase recycled content, and use less packaging overall. All of the wood fiber in our packaging is either recycled or comes from responsibly managed forests.⁵ And we have protected or created enough responsibly managed forests to cover all the virgin wood fiber we use in our packaging.⁶ This ensures working forests are able to regrow and continue to clean our air and purify our water.

89%

of the packaging⁷ is fiber based, due to our work to use less plastic in packaging

34%

recycled content in fiber packaging

100%

of the virgin wood fiber in the packaging comes from responsibly managed forests⁵

Use

HomePod mini uses 75 percent less energy than the requirement for ENERGY STAR.

We design our products to be energy efficient, long lasting, and safe. HomePod mini uses software and power-efficient components that intelligently manage power consumption. We also run our own Reliability and Environmental Testing Labs, so our products go through rigorous testing before they leave our doors. Our support continues throughout each product’s life cycle, with regular software updates to keep devices current and a network of authorized repair professionals to service them, if necessary.

Energy consumption of ENERGY STAR-rated products

Apple devices consistently rank among the high-performing products rated by ENERGY STAR, which sets specifications that typically reflect the 25 percent most energy-efficient devices on the market. HomePod mini in low power mode consumes 75 percent less energy than the requirement for ENERGY STAR.⁸

Designed to last

To maximize durability, we assessed HomePod mini in our Reliability Testing Lab, using rigorous testing methods that simulate customers’ experiences.

Made with smarter chemistry

We apply rigorous controls for materials users touch—all based on recommendations from toxicologists and dermatologists.

Recover

Return your product with Apple Trade In and we'll ensure it has a long life or recycle it for free.

When products are used longer, fewer resources are extracted from the earth. That's why we launched Apple Trade In—it offers customers a seamless way to return their old devices and accessories to Apple. Eligible devices can be traded in for credit or an Apple Store Gift Card, while accessories and other devices can be recycled for free.⁹ We also offer and participate in [product take-back and recycling collection programs](#) for 99 percent of the countries where we sell products—and we hold our recyclers to high standards. Our efforts to keep harmful substances out of our products also mean our materials are safer to recover and reuse.

Apple Trade In

apple.com/trade-in

Definitions

Recycled materials: Recycling makes better use of finite resources by sourcing from recovered rather than mined materials. Recycled content claims for materials used in our products have been verified by an independent third party to a recycled content standard that conforms to ISO 14021.

Bio-based plastics: Bio-based plastics are made from biological sources rather than from fossil-fuel sources. Bio-based plastics allow us to reduce reliance on fossil fuels.

Renewable materials: We define bio-materials as those that can be regenerated in a human lifespan, like paper fibers or sugarcane. Bio-materials can help us use fewer finite resources. But even though bio-materials have the ability to regrow, they are not always managed responsibly. Renewable materials are a type of bio-material managed in a way that enables continuous production without depleting earth's resources. That's why we focus on sources that are certified for their management practices.

Supplier Clean Energy Program: Since the electricity used to make our products is the largest contributor to our overall carbon footprint, we're helping our suppliers become more energy efficient and transition to new renewable energy sources. We're committed to transitioning our entire manufacturing supply chain to 100 percent renewable electricity by 2030.

Carbon footprint: Estimated emissions are calculated in accordance with guidelines and requirements as specified by ISO 14040 and ISO 14044. There is inherent uncertainty in modeling carbon emissions due primarily to data limitations. For the top component contributors to Apple's carbon emissions, Apple addresses this uncertainty by developing detailed process-based environmental models with Apple-specific parameters. For the remaining elements of Apple's carbon footprint, we rely on industry average data and assumptions. Calculation includes emissions for the following life cycle phases contributing to Global Warming Potential (GWP 100 years) in CO₂ equivalency factors (CO₂e):

- **Production:** Includes the extraction, production, and transportation of raw materials, as well as the manufacture, transport, and assembly of all parts and product packaging.
- **Transport:** Includes air and sea transportation of the finished product and its associated packaging from manufacturing site to regional distribution hubs. Transport of products from distribution hubs to end customers is modeled using average distances based on regional geography.
- **Use:** Apple assumes a three- or four-year period for power use by first owners based on the product type. Product use scenarios are based on historical customer use data for similar products. Geographic differences in the power grid mix have been accounted for at a regional level.
- **End-of-life processing:** Includes transportation from collection hubs to recycling centers and the energy used in mechanical separation and shredding of parts. For more information on the carbon footprint, visit apple.com/environment/answers.

Endnotes

¹ Apple defines its restrictions on harmful substances, including definitions for what Apple considers to be "free of," in the [Apple Regulated Substances Specification](#). Every Apple product is free of PVC and phthalates with the exception of AC power cords in India, Thailand (for 2-prong AC power cords), and South Korea, where we continue to seek government approval for our PVC and phthalates replacement. Apple products comply with the European Union Directive 2011/65/EU and its amendments, including exemptions for the use of lead such as high-temperature solder. Apple is working to phase out the use of these exempted substances where technically possible.

² Greenhouse gas emissions were calculated using a life cycle assessment methodology in accordance with ISO 14040 and 14044 standards.

³ Third-party assessments seek to confirm sourcing practices and are part of our responsible sourcing program. In addition, our efforts consider conflict, human rights, and other risks.

⁴ Only chemicals that meet GreenScreen® benchmark 3 or 4 are considered safer and preferred for use. Final assembly sites for HomePod mini are among the 18 final assembly supplier facilities that have adopted these safer cleaners. GreenScreen® is a comprehensive hazard assessment tool that evaluates substances against 18 different criteria. For more information, visit www.greenscreenchemicals.org.

⁵ Responsible sourcing of wood fiber is defined in Apple's [Sustainable Fiber Specification](#). We consider wood fibers to include bamboo.

Endnotes

⁶ For more information about our work to protect and create responsibly managed forests, please read our [Environmental Progress Report](#).

⁷ Breakdown of U.S. retail packaging by weight.

⁸ Energy consumption and energy efficiency values are based on the ENERGY STAR Program Requirements for Audio/Video Version 3.0. For more information, visit www.energystar.gov. ENERGY STAR and the ENERGY STAR mark are registered trademarks owned by the U.S. Environmental Protection Agency.

All energy values assume a Wi-Fi connection.

- Low power mode/Sleep: Low power state that is entered automatically after Music playback stops.
- Music playback: Condition in which a typical music track is played on HomePod mini from iTunes at 50 percent volume. Power will vary depending on music track and volume.
- Power adapter efficiency: Average of the Apple 20W USB Power Adapter measured efficiency when tested at 100 percent, 75 percent, 50 percent, and 25 percent of the power adapter's rated output current.

Mode	Power consumption for HomePod mini		
	100V	115V	230V
Low power mode	0.67W	0.68W	0.71W
Music playback	1.34W	1.40W	1.28W
Power adapter efficiency	86.8%	87.9%	87.8%

⁹ Trade-in values vary based on the condition, year, and configuration of your trade-in device, and may also vary between online and in-store trade-in. You must be at least 18 years old. In-store trade-in requires presentation of a valid, government-issued photo ID (local law may require saving this information). Additional terms from Apple or Apple's trade-in partners may apply.
